Natural, elegant and durable

Wood Floor Collections

Natural and ecologic oils 

Ditton Wood specializes in the manufacture of hardwood flooring and pine. Ditton Wood owns a finishing factory that uses natural oils and boasts an application process unique in North America.

Ditton Wood innovates with its new Duratec finish thanks to the technological oiling procedure used. It provides a brighter, richer finish with a surface sheen, crystal clear transparency, and exceptional durability. Our Duratec finish is made with natural oils and any damage to it can easily be fixed with our repair products. Your Duratec finish will improve with the years, thanks to the surface sheen that gives your home a unique charm.

Ditton Wood is the only manufacturer that offers a tongue and groove floor that is oiled the same colour as the floor surface to hide the spaces between the boards in winter when the humidity level is very low.

Ditton offers high-quality, durable products for the house of your dreams or your cottage, country home, business or renovation project.

Our company is devoted to contributing to a healthy future, thus our products have natural, ecologically friendly finishes.

Wood is a more appealing choice than ever when combined with environmentally friendly finishing and maintenance products.

Manufactured in Quebec

Natural and ecologic oils

Ditton Wood is concerned to save the planet and to ensure a better quality of life for everybody today and for future generations.

Our wood flooring is environmentally friendly:

- Natural and ecologic oils
- Little energy is consumed since the wood is purchased locally rather than overseas for floors made in China and exotic woods
- Our wood is highly durable (from generation to generation) compared to floating floors, ceramic tiles and carpets
- Our factory takes great care to minimize losses in wood processing. We use as many scraps as possible in manufacturing our products
- Manufactured in Quebec
- Natural product (wood and natural oils) containing no products that are harmful to health
- Leed certification

Environmental protection and conservation.

Classic

Collection

Chic, warmth and elegant

A personalized touch

Discover the warmth and beauty of our Classic Collection. Our pre-oiled flooring offers a value added to make your home more beautiful and enjoyable.

All our products are pre-finished with natural oils and are top of the line. Many species and tints are available to allow a more personalized touch and a casual look to your decor.

Torrefied Collection

*Natural
and healthy for you*

The favourite

Torrefaction is an artisanal technique that has been used for centuries to enhance the esthetic and physical features of wood.

Torrefaction involves heating wood at relatively high temperatures to improve the properties of the wood without the addition of chemicals or toxic substances. Torrefied wood can be apply on radiant floor heating, concrete floor, basement and bathroom.

All our products are pre-finished with natural oils and are top of the line. Many species and tints are available to allow a more personalized touch and a casual look to your decor.

Advantages around

- **Practically inexistent moisture content:**
Torrefied wood has practically no (close to 0%) internal moisture and will not reabsorb moisture from the air or surface runoff since its hygroscopic properties are altered by the heating process.
- **Dimensional stability:**
Torrefied wood will not shrink, swell or warp with changing weather and moisture conditions. It is therefore ideal for precision applications such as furniture, doors and windows.
- **Ecologic:**
Torrefaction uses no chemicals or toxic substances. The production and use of torrefied wood is therefore perfectly safe and in compliance with the most stringent environmental and export standards. Moreover, torrefied wood unlike chemically treated wood can be safely handled, transported and processed immediately.
- **Esthetic:**
Torrefaction can enrich the hue and appearance of practically all species, which opens up new possibilities for many species that have never been considered esthetically pleasing.
